

Jung Type Indicator (JTI)

The Jung Type Indicator is a reliable, non-ipsative personality measure based on Jung's typology. With only sixty items, it is very quick to complete and extremely economical to use. It is based on a familiar, well established theoretical framework. Many users can benefit from their prior experience with Jungian typology-based measures. Specifically, Jung's model of psychological type identifies dimensions of preference: Extraversion VS Introversion, Thinking VS Feeling and Sensing VS Intuition. The fourth dimension, Judging VS Perceiving identifies a person's dominant preference toward the world.

Scales measured

| | |
|--------------|--------------|
| Extraversion | Introversion |
| Sensing | Intuiting |
| Thinking | Feeling |
| Judging | Perceiving |

The JTI Computer-generated report

The Jung Type Indicator's computer-Generated report is exceptionally useful. Besides discussing the respondent's personality scales as measured by the questionnaire, the report gives a comprehensive discussion of behaviour at work, with strengths and development areas.

Timing

While the JTI is not timed, it usually takes around 15 minutes to complete plus administration time.

Classification status

Classified as a psychological test by the Professional Board for Psychology

Intended respondents

Adults with educational level of grade 12+ . Applications include team building, development, coaching and guidance.

Manuals

- Technical Manual
- Sixteen Types Booklet
- South African User Guide and Research Reference

Scoring and reporting cost

The Jung Type Indicator represents exceptional value for money. Administration and scoring on the GeneSys system costs only one credit, while on the online system the questionnaire uses two credits. A paper and pencil option is also available.
