**RESPONDENT**

# FEEDBACK REPORT

**ABILITY**

## REPORT STRUCTURE

The Mechanical Reasoning Test assesses your capacity (a composite of speed and accuracy) to perceive logical patterns and relationships in new material you have not previously encountered, and deduce the logical consequences of these (i.e. logical deductive reasoning). This incorporates the ability to: learn and understand complex new material; use logic to develop arguments that are rational and well-reasoned; deduce the logical consequences of a given set of rules, assumptions or relationships.

### THE FEEDBACK REPORT

The Feedback Report provides a detailed breakdown of your performance across the sub-scales (Mechanical Reasoning, Spatial Reasoning and Visual Acuity) in the following sections:

#### 1. Mechanical Reasoning

- Scale Description
- Result Description

#### 2. Spatial Reasoning

- Scale Description
- Result Description

#### 3. Visual Acuity

- Scale Description
- Result Description

#### PLEASE NOTE

The following report provides a summary of your performance on the tests which you have recently completed. The tests were used to help in the assessment of your personal qualities and abilities. It is important for you to note that these questionnaires and tests only provide an approximate description of your personality and abilities. In addition, these play only a small part in the selection process, and will be considered alongside such factors as education, training, experience, motivation etc. All of your results will be treated in the strictest of confidence. The use of these tests is restricted to professionals who have been trained in testing, and will be able to interpret the significance of your profile within a work setting.

## MECHANICAL REASONING

### Scale Description

The Mechanical Reasoning Test measures a broad ability to understand mechanical and physical principles from a wide range of areas, including optics, electrics, fluids and mechanics.

### Result Description

Your performance on the Mechanical Reasoning Test shows that you has performed at a 'just above average' level when compared to the normative group. This indicates a relatively good level of understanding of mechanical principles. This should enable you to grasp new concepts and put them to practical application.

## SPATIAL REASONING

### Scale Description

The Spatial Reasoning Test measures the ability to manipulate, and reason about, shapes and spatial relationships.

### Result Description

Your performance on the Spatial Reasoning Test shows that you has performed at a 'slightly lower than average' level when compared to the normative group. While you should be able to grasp some new spatial relationships outside of your previous experience, this may take you a little longer than some.

## VISUAL ACUITY

### Scale Description

The Visual Acuity Test measures the aptitude for performing tasks which require a great deal of visual precision.

### Result Description

Your performance on the Visual Acuity Test is within the top 15% of the normative group, indicating a very high level of ability for tasks requiring visual precision.
